- ❖ Compliance with:
  - ❖ ESA standards
  - ❖ CCSDS standards

---

# Relevant Projects

---

## European Space Agency

- Extending Internet into Space project
  - Phase 2
  - Phase 3

## European Commission

- FP7 Space Internetworking Center project

# CORTEX CRT-XL

---

- ❖ COTS Telemetry, Tracking and Command (TT&C) processing system:  
*A representative legacy system typically used in Ground Stations*

CCSDS Packet TM on the downlink

CCSDS Packet TC on the uplink

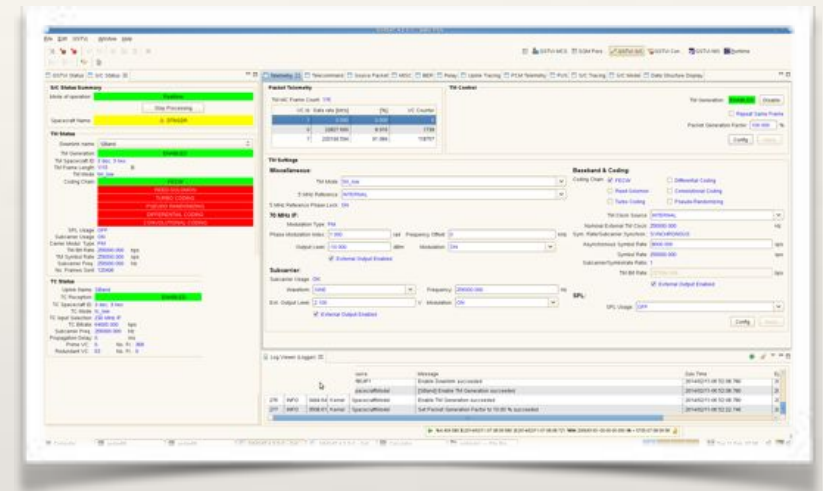

CCSDS SLE services

Fully compatible with most well known satellites used by NASA, ESA

# SIMSAT and PSS

- ❖ **SIMSAT:** A general purpose real-time simulation infrastructure developed for ESA

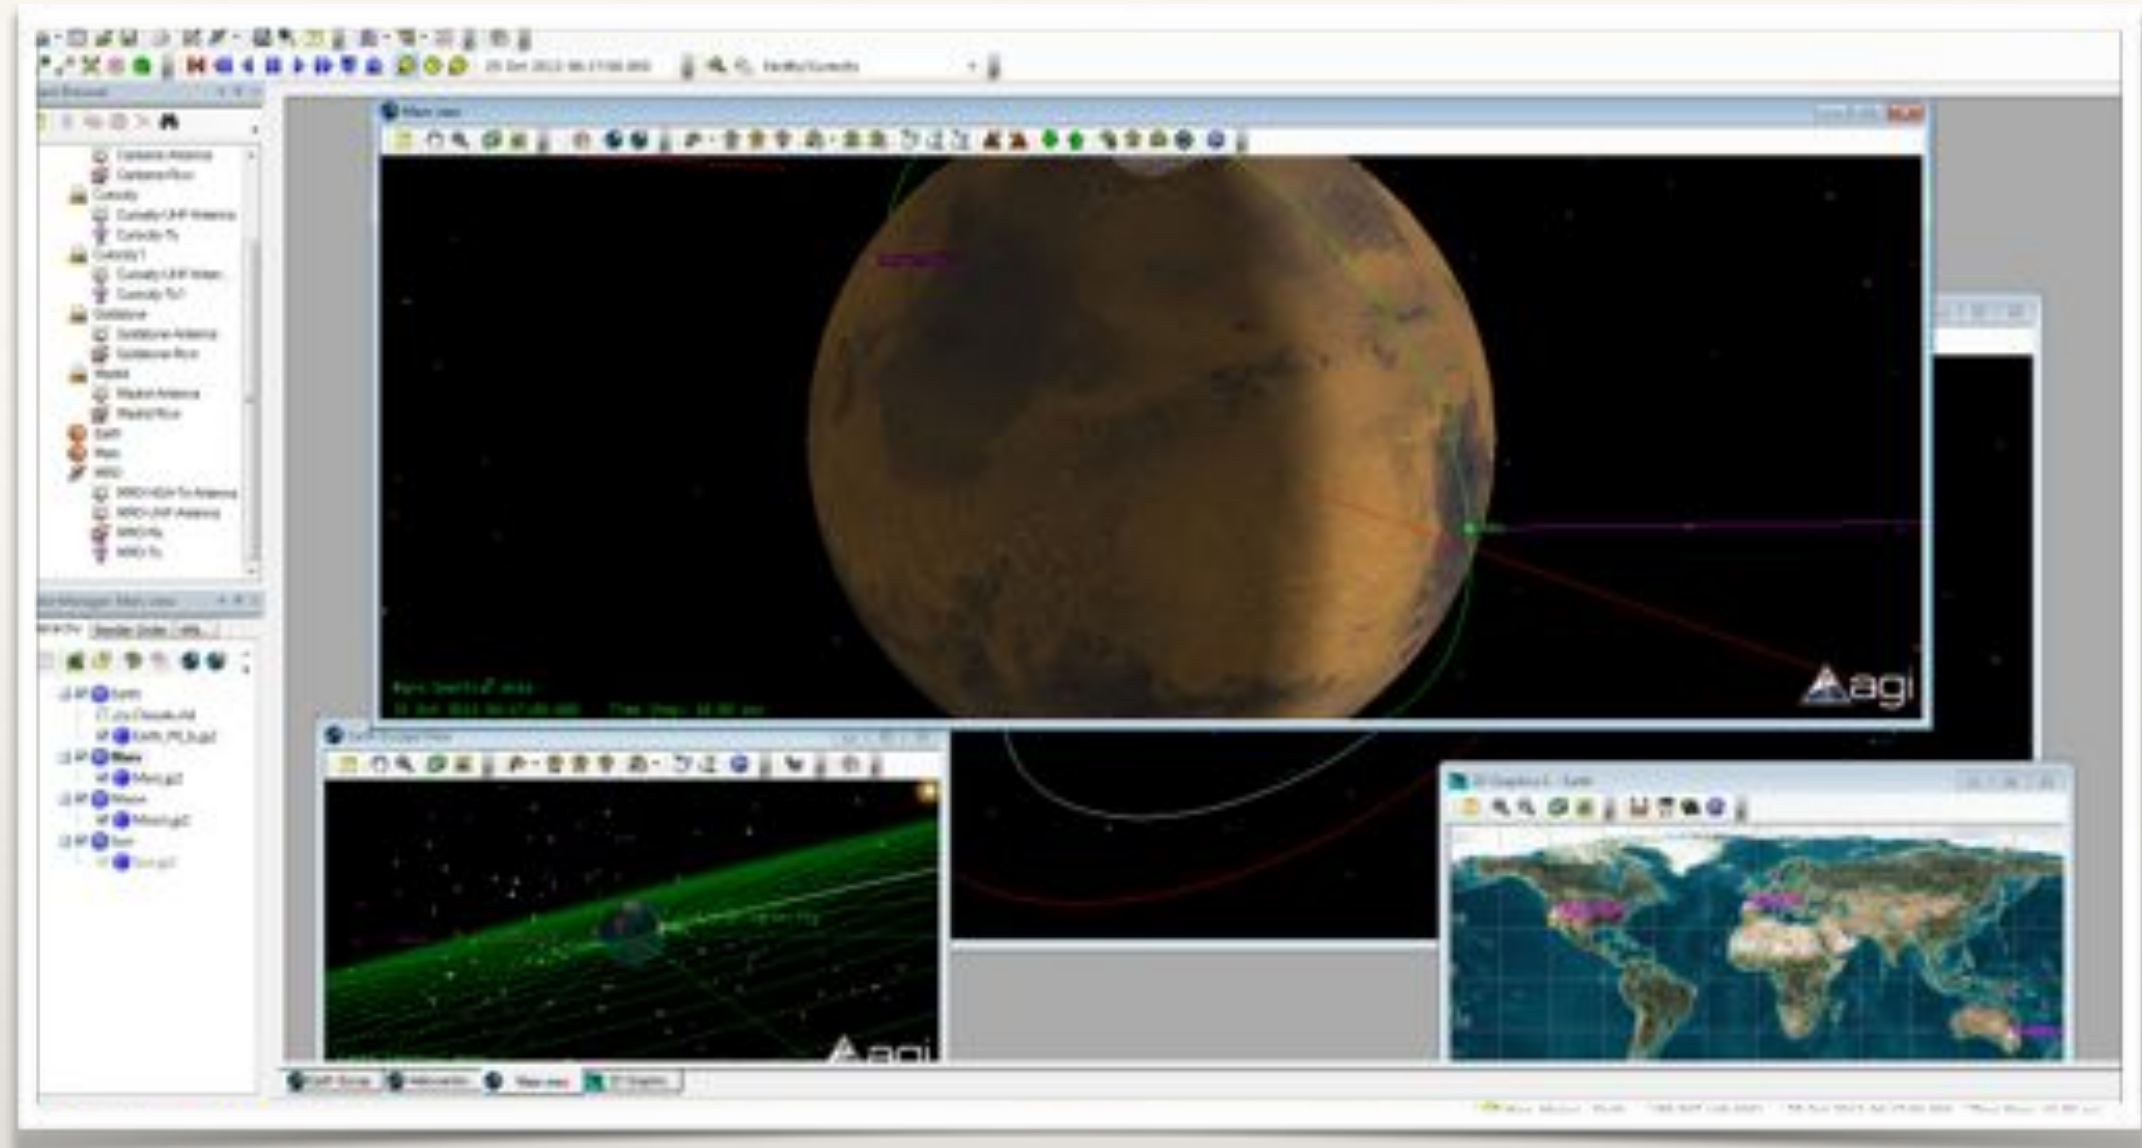

- ❖ **PSS:** A generic Linux-based system capable of:

- ❖ Generating telemetry flows
- ❖ Processing telecommands
- ❖ Generating “bad” frames or inserting random BER

TM and TC data are exchanged between SIMSAT and PSS

General-purpose modelling and analysis application

# Satellite Tool Kit (STK)

# Testbed Architecture

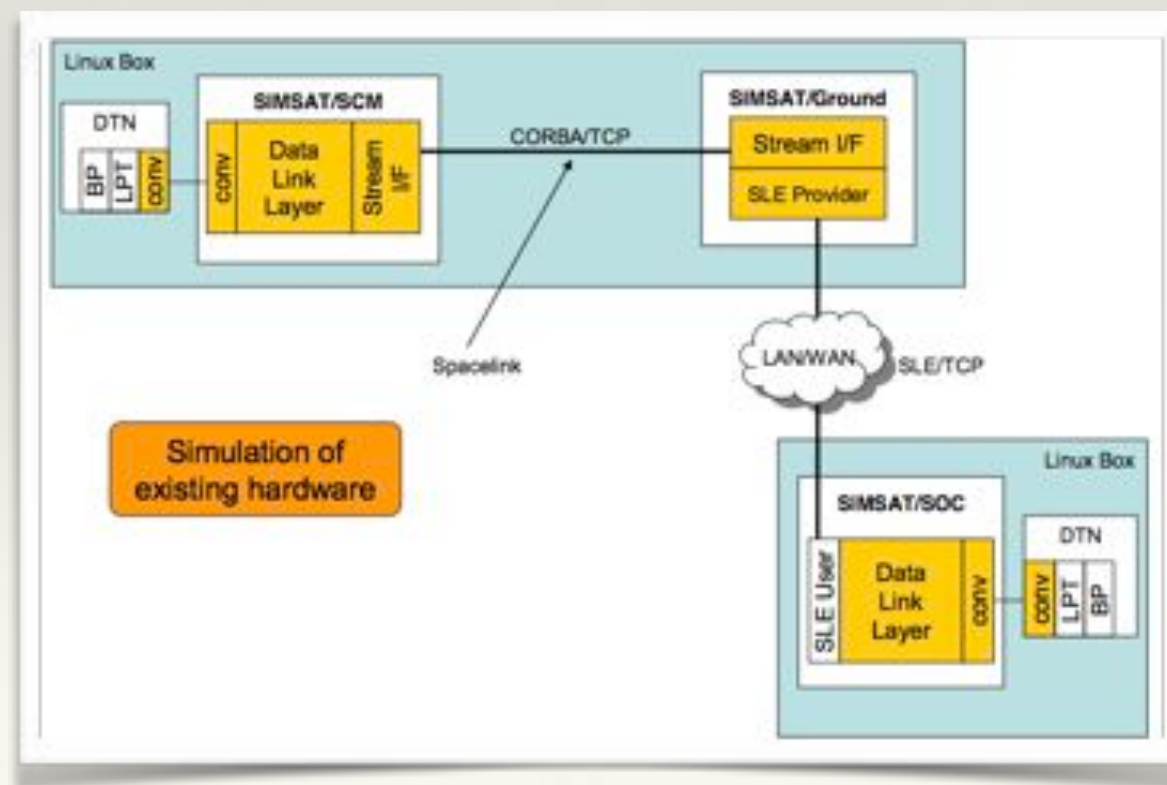

# Type I: Simulated Space Data Link Protocols

- ❖ Integrated within DTN protocol stack (over UDP / IP)
- ❖ Insertion of propagation delay and PER through NetEm
- ❖ Support of CCSDS Proximity-1
- ❖ Complex scenarios

# Type II: SIMSAT-based emulation

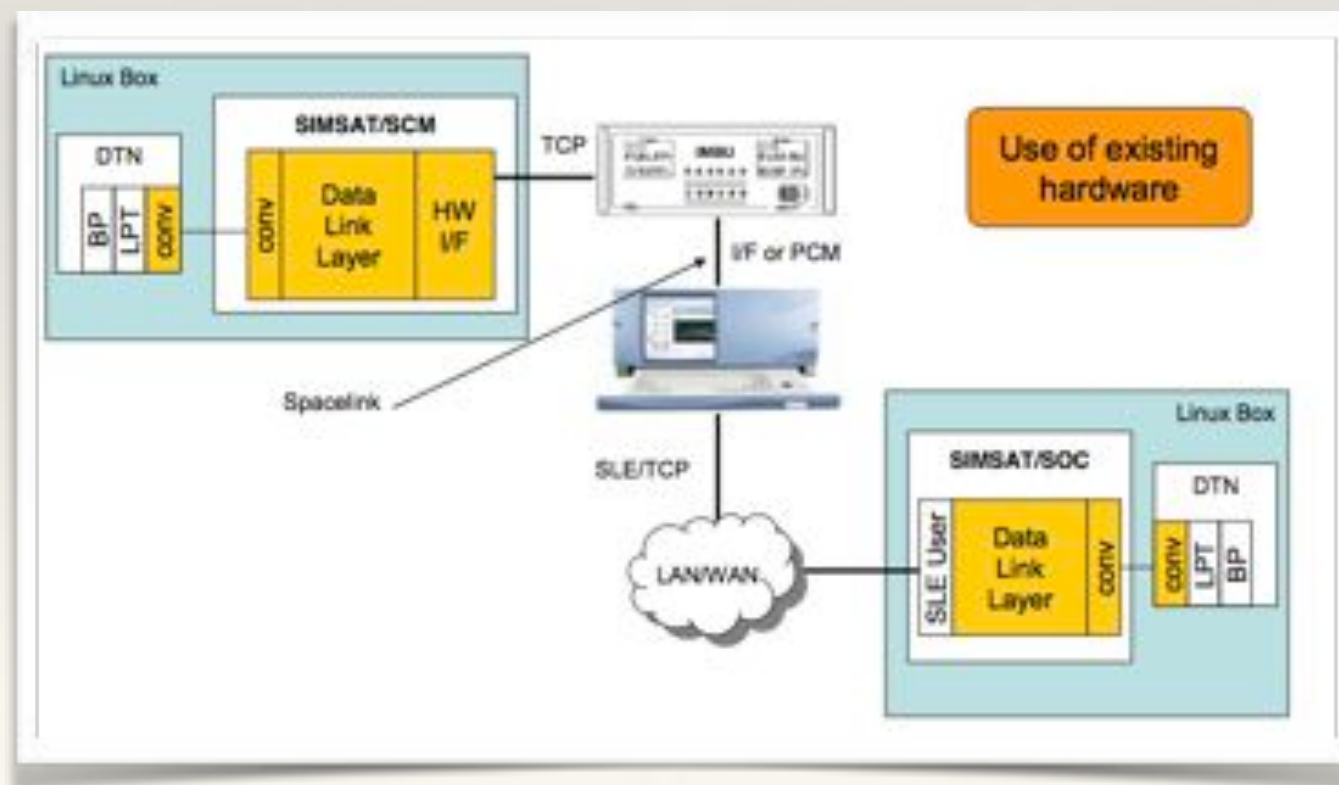

- ❖ Implementation of a simulated spacelink (over CORBA/TCP)
- ❖ Realistic models for earth and space assets
- ❖ Alleviates the need for special hardware
- ❖ Requires more effort on configuration

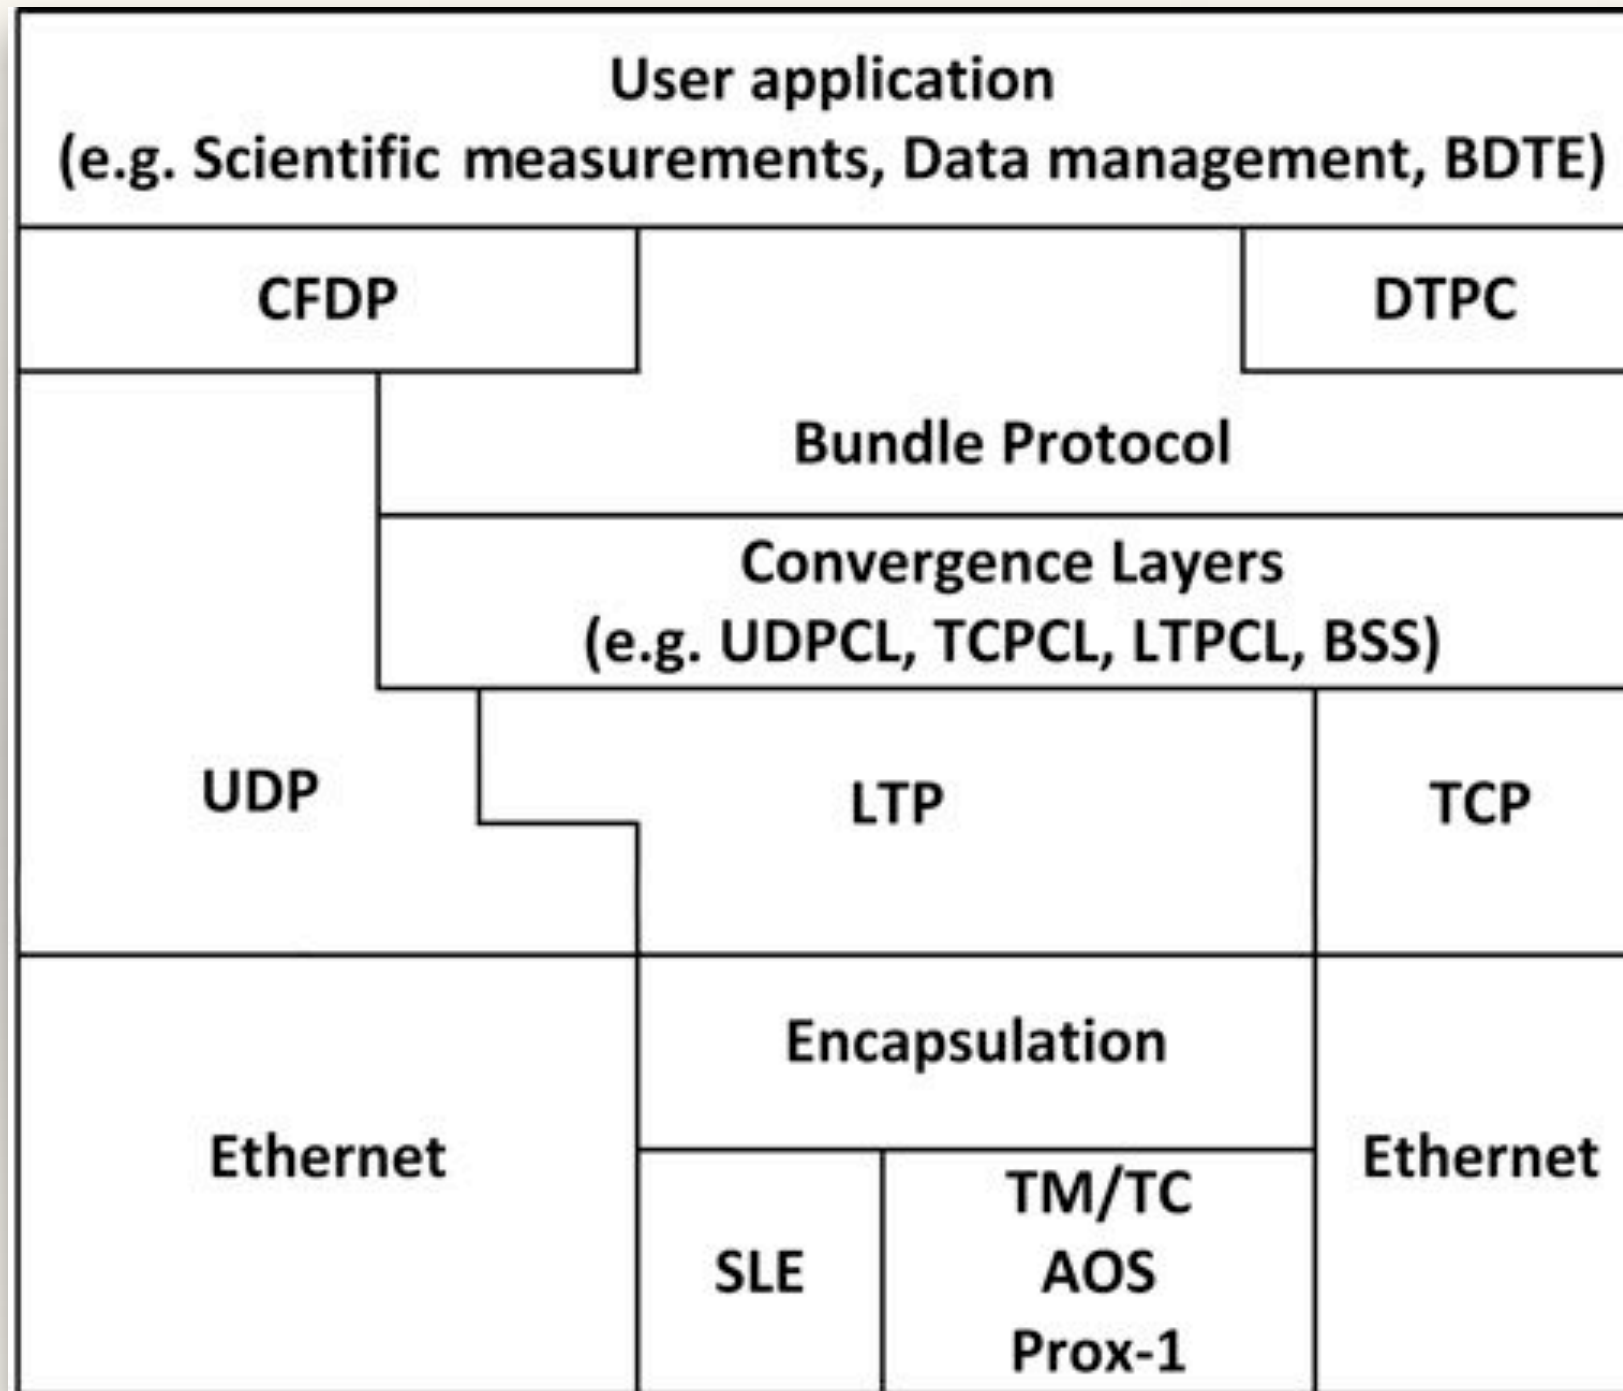

# Type III: Hardware-based emulation

- ❖ Single emulated space link
- ❖ SLE-based communication between G/S and MOC
- ❖ Performance evaluation over contemporary implementations of space data link protocols
